- Double-Rail Outputs on 'LS398
- Single-Rail Outputs on 'LS399
- 'LS398 is Similar to 'LS298, Which Has Inverted Clock
- Selects One of Two 4-Bit Data Sources and Stores Data Synchronously with System Clock
- Applications:
  - Dual Source for Operands and Constants in Arithmetic Processor; Can Release Processor Register Files for Acquiring New Data
  - Implement Separate Registers Capable of Parallel Exchange of Contents Yet Retain External Load Capability
  - Universal Type Register for Implementing Various Shift Patterns; Even Has Compound Left-Right Capabilities

## description

These monolithic quadruple two-input multiplexers with storage provide essentially the equivalent functional capabilities of two separate MSI functions (SN54LS157/SN74LS157 and SN54LS175/SN74LS175) in a single 16-pin or 20-pin package.

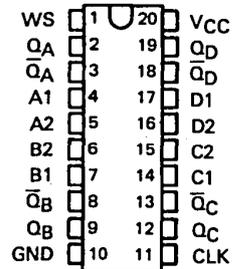

When the word-select input is low, word 1 (A1, B1, C1, D1) is applied to the flip-flops. A high input to word select will cause the selection of word 2 (A2, B2, C2, D2). The selected word is clocked to the output terminals on the positive-going edge of the clock pulse.

Typical power dissipation is 37 milliwatts. SN54LS398 and SN54LS399 are characterized for operation over the full military range of  $-55^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ , SN74LS398 and SN74LS399 are characterized for operation from  $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$ .
