- Fully Parallel 4-Bit ALU's in 20-Pin Package for 0.300-Inch Row Spacing
- Ideally Suited for High-Density Economical Processors
- 'LS381A and 'S381 Feature \bar{G} and \bar{P} Outputs for Look-Ahead Carry Cascading
- 'LS382 Features Ripple Carry ($C_n + 4$) and Overflow (OVR) Outputs
- Arithmetic and Logic Operations Selected Specifically to Simplify System Implementation:
 - A Minus B
 - B Minus A
 - A Plus B
 - and Five Other Functions

description

The 'LS381A, 'S381 and 'LS382 are low-power Schottky and Schottky TTL arithmetic logic units (ALUs)/function generators that perform eight binary arithmetic/logic operations on two 4-bit words as shown in the function table. The exclusive-OR, AND, or OR function of the two Boolean variables is provided without the use of external circuitry. Also, the outputs can be cleared (low) or preset (high) as desired. The 'LS381A and 'S381 provide two cascade outputs (\bar{P} and \bar{G}) for expansion utilizing SN54S182/SN74S182 look-ahead carry generators. The 'LS382 provides a $C_n + 4$ output to ripple the carry to the C_n input of the next stage. The 'LS382 detects and indicates two's complement overflow condition via the OVR output. The overflow output is logically equivalent to $C_n + 3 \oplus C_n + 4$. When the 'LS382 is cascaded to handle word lengths longer than four bits in length, only the most significant overflow (OVR) output is used.

The SN54' Family is characterized for operation over the full military temperature range of -55°C to 125°C . The SN74' family is characterized for operation from 0°C to 70°C .

function table

Certain differences exist in the \bar{G} , \bar{P} ('LS381A, 'S381) and OVR, C_{n+4} ('LS382) function table compared with similar parts from other vendors. No differences exist in the arithmetic modes (B minus A, A minus B, and A plus B), where these outputs perform valuable cascade functions.

There are slight differences in the other modes (CLEAR, A + B, $A \oplus B$, AB, and PRESET), where these outputs are strictly "don't care."

This function table is a condensed version and assumes for A_n that A0, A1, A2, and A3 inputs all agree and for B_n that B0, B1, B2, and B3 inputs all agree. This table is intended to point out the response of these \bar{G} , \bar{P} ('LS381A, 'S381) and OVR, C_{n+4} ('LS382) outputs in all modes of operation to facilitate incoming inspection.
